**Description:**

This project is a simple mobile shopping application developed using Kotlin Jetpack Compose in Android Studio. This application displays multiple shoe products with images, prices, and Add to Bag functionality. Users can add products to the shopping bag and view the updated total amount.

**Features:**

- Kotlin Jetpack Compose UI
- Product cards with images
- Scrollable product list
- Shopping bag total calculation
- Add to Bag functionality
- Simple and user-friendly interface

**Project Structure:**

- MainActivity.kt → Main application UI and business logic
- drawable folder → Product images
- res folder → Application resources
- Gradle Scripts → Project build configuration

**Software Used:**

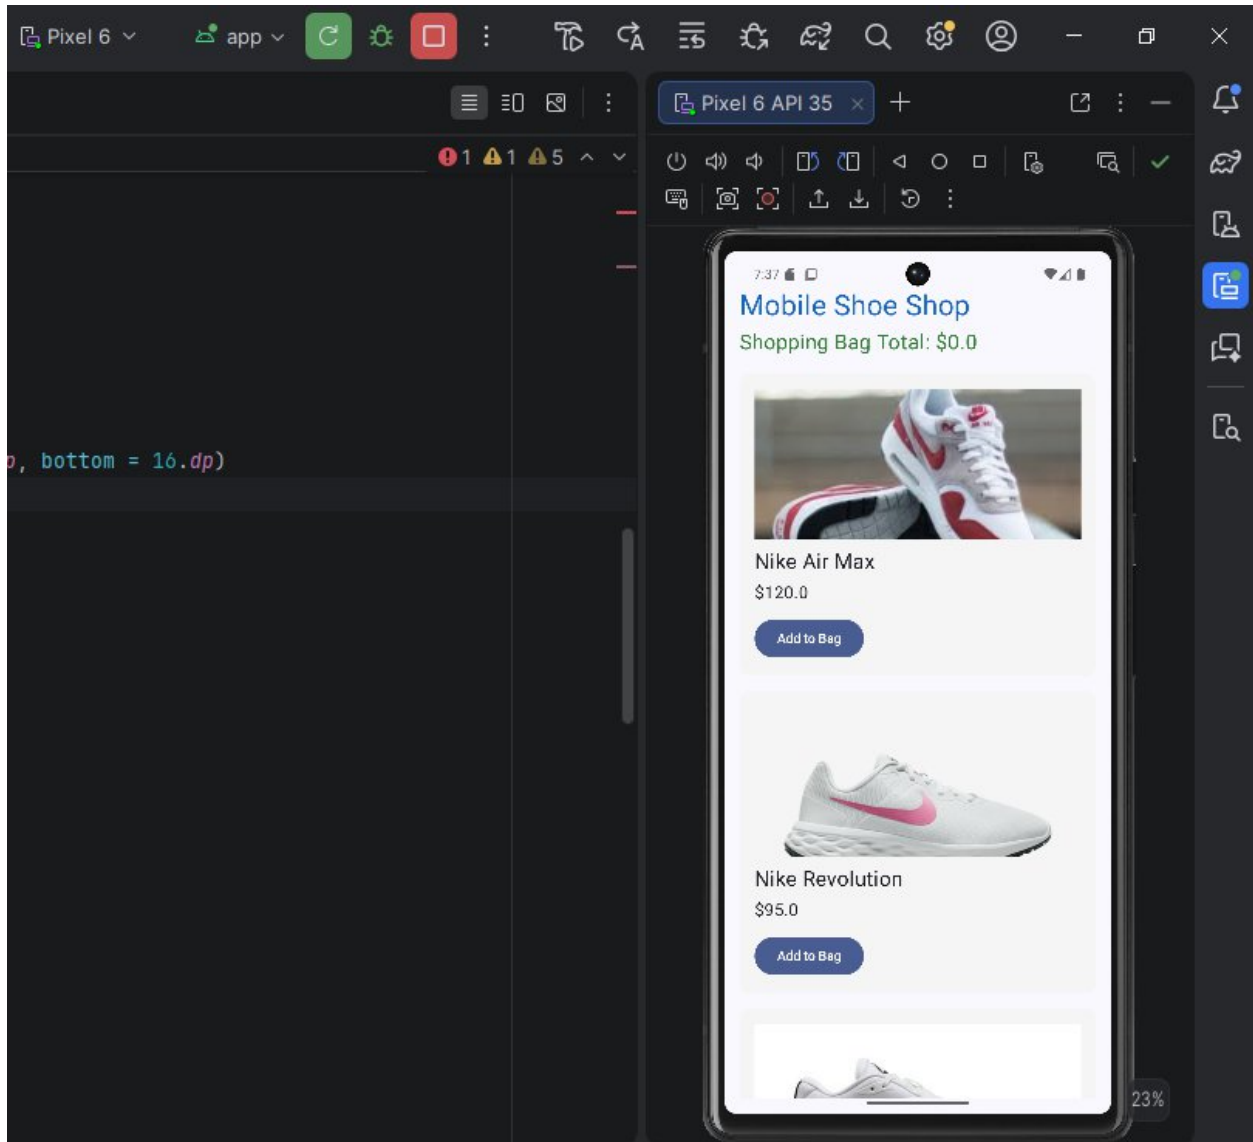

- Android Studio
- Kotlin
- Jetpack Compose

**How to Run the Project:**

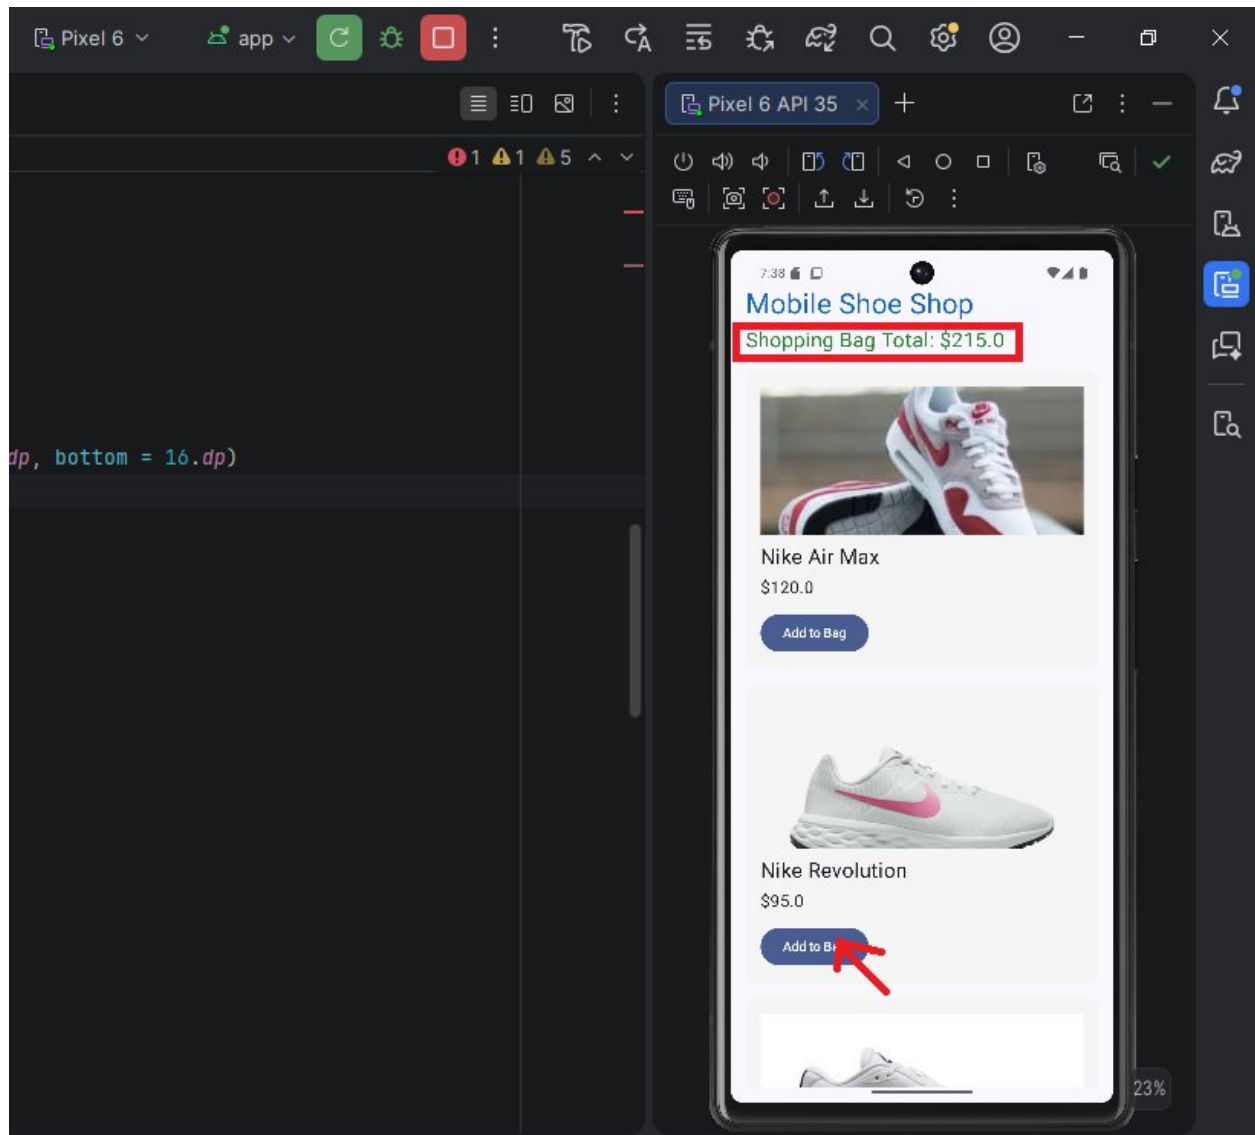

1. Open the project in Android Studio.
2. Allow Gradle build to complete.
3. Start Android Emulator or connect Android device.
4. Click Run ► to execute the application.
